

Retrofit of sterilization and pasteurization systems

Boost your equipment without replacing them!

STERITECH has been committed to providing the most efficient and environmentally friendly equipment for your sterilization and pasteurization projects for over 35 years.

RETROFITTING equipment is part of this eco-responsible approach. It allows you to extend the life of your equipment while improving its performance.

Mechanical **RETROFITTING** involves replacing certain defective parts. It also makes your equipment smarter by updating the control system. The equipment is brought into compliance with safety standards.

This approach avoids major investments in new equipment. Replacing components and updating the control software improves the productivity and energy performance of the machines.

Increase your energy efficiency and performance

Automate your production lines

Automating production lines improves the safety and ergonomics of your equipment and reduces work-related stress.

The automatic system control is developed to be integrated into your production management. The mechanization part is carried out with our partners.

Better quality and traceability of products

The **TRILOGY** interface allows a better production management according to your products. It is integrated into the overall control management of your factory. Product data tracking and management are ensured and linked to production data.
